

# everything is wrong 2024-04-09

WiFi on the frequency 2.4 GHz, like the microwave oven, is the frequency that opens between the pineal gland and the brain so that the poison can enter the brain. Pineal gland usually prevents all kinds of substances to the brain, but not 2.4 GHz, WiFi or Bluetooth.

Rudolf Steiner predicted that in 1970 and until today, attempts would be made to destroy the pineal gland and gain control of the brain. With our WiFi and Bluetooth, the game is run for 99.99% of all people. We know one of the lucky ones, namely Barry Tower, which lives with POTS (plain old telephone system) and no Internet connection and no computer or mobile phone. He studied Micro Wave in the military and is one of the most skilled in Micro Wave weapons and the influence on people.

I've always been a bit afraid of long-term radio. But I haven't been too good either. When WiFi started to become common around 2000, I also used WiFi. I used the microwave oven since 1998, but always walked a few steps from it. In 2019, I put all the computers in the wire and threw out the microwave oven. In 2022, I realized how good it was to get rid of the various radio transmitter devices: WiFi, Bluetooth and microwave oven. The internet enters the house via glass wire and is converted into wires that go through a number of 16 ports of routes of up to 1Gbit.

The phone is an IP-SIP that sits in one of the 16 ports. If I go on holiday, I have IP-SIP under my arm and can connect to the Internet at the resort. When I'm out in the woods or shopping, there's probably no one at the teaphone, so people have to try sometime later. Anyone can get an IP SIP. It is a small box with at least a mains connection and a telephone jack. You can choose to have an IP-SIP completely finished, delivered from a provider, or you can buy an IP-SIP from the computer store and get access from your provider. You can also talk to another IP-SIP directly when you know the IP address of both parties. But now we are probably too far out for ordinary people.

By turning off the radio waves, you will be far less ill, become more refreshed and cheerful and will actually be happy to be able to go for a walk in the beech forest without the phone grinding.

If you want to know for sure who has BIO-Tex 'COVID-19 Vaccinated' in them, install 'Bluetooth BLE Device Finder', turn on Bluetooth and keep an eye out for 'Unknown name,...'. Unknown name means that the device does not have a known name. Your pad or mobile phone where you installed the app can usually see people 100 meters away, but sometimes it can be so weak that they have to go all the way to you.

Some will claim that they are BIO-Tex, but this is because they have been given salt water instead, or because BIO-Tex has not worked.

There is usually no electronic signal emanating from the body, but nano-tech computers in the blood during BIO-Tex vaccination can provide these MAC/IP addresses that serve to identify the holder.

I have been told that the forehead of the BIO-Tex 'Vaccinated' lights up when illuminated with UV light. It is used at some airports, where they scan people with UV cameras to see if they are 'Vaccinated'.

There is usually nothing luminescent on animals or humans.

You can usually find the place where the BIO-Tex 'Vaccinated' is by passing a metal gizmo

past your arm. Also, the forehead is sometimes magnetic.  
There is usually nothing magnetic on animals or humans.

When we take a closer look at 60GHz (5G), the absorption of oxygen in the blood is made difficult or if the signal is strong, then oxygen in the blood is completely shut off. That is, it does not matter whether people have been BIO-tek 'vaccinated' or not. 60GHz is unfortunately WiFi in 5G and intended for IOT, such as various objects in the house and people.

If we only get moderate strength of 60GHz, then the ability of blood to absorb oxygen will be somewhat limited. We lose our breath when we climb the stairs. My assumption is that it will cause more diseases.

If we look at oxygen as a result of frequency, then it is very sudden that it increases, 59-62GHz, which precisely goes to WiFi.

Luminous nanorobots are unfortunately now normal in almost all humans and presumably animals. Dr. Ane Maria Mihalcea talks about the robots and how they intelligently handle all sorts of construction sites.

Some robots take care of making electrical circuits and some make antennas using the blood. <https://anamihalceamdphd.substack.com/p/artificial-intelligent-transformation>

There may be an opportunity to combat pollution. I have tried to get the MasterPeace MasterRestore Combo from the U.S. to Sweden, but it is possible that it has been removed from the criminal customs. I will try to get H<sub>2</sub>O<sup>2</sup>, hydrogen-over-oxygen, in Sweden. It is water with that extra oxygen atom. My mother gave it to me in the 1950s when I failed something.

It is difficult to say how far we go to oppose the New World Order (slavery). If we can agree to 1990 with substantial modern facilities, then it will be very difficult to implement the new world order.

1990 means no mobile phone, WiFi or Bluetooth. Telephone wires are more often less discontinued, so we need SIP and a number of 'old-fashioned' telephones. All computers, amphibians and other equipment must be wired with network cable. The microwave must have the hammer as it also emits 2.5GHz or professional 900MHz and removes the vitamins from the food. Hearing loops and microphones must be with cables.

You can use your mobile phone with the following restrictions:

Turn on all transmission plus airplane mode.

For connection with the Internet connect by wire / mains cable.

Play music from your mobile while walking in the woods, unless you want to hear the birds singing.

Listen to music and watch movies with mains cable.

Bank lock-up or ID with mains cable.

But one thing you need to know: Most modern mobile phones send GPS and the like every 5 minutes, even if you have turned it off. So really, the police and other agents are well aware of where you are. If you are 'vaccinated' then your body will have to emit one or more Mac addresses when powered from 2.4GHz.

We are at war with the government, the police (the majority), the top leadership of the military, NATO, WEF, WHO, UN (UN), service organizations and manufacturing companies on an international scale. It is a question of whether 7 billion of us will survive and when it will go completely wrong. If we don't fight to get healthy food, clean skies and almost total cuts of wireless networks, as well as put war to a minimum.

I write to the police once I see a plane polluting the sky, chem-trails. We must fight against the military and NATO getting involved in Ukraine and other countries. We need to protect

the bees by removing 99% of all wireless connectivity. The bees eventually die, after which we cannot have apples and the like.

Things that are not entirely certain: Seals and sea lions are not doing so well all over the world. It can be pollution, but it can also be radio transmission. The seals are perhaps much more sensitive to 4G and 5G antennas. It is limited how many birds there are in built-up areas, which can be pollution, but to the highest degree 4G and 5G.

What do young people die from:

BIO-tek 'vaccine' causes sudden death without people trying not to after who it is that attacks.

With 5G or similar, people will try to look up for an attacker, fall over and stretch their arms and legs. As a rule, they die. It can probably also affect the unvaccinated.

It can also go a little quieter by the 'vaccinated' getting very long artificial plugs over the years. We are talking about plugs that are up to the length of one leg. These are not natural clots like blood clots. The plugs are formed by nano-robots. In a drop of blood, there are about 1 million luminous nano-robots, much like blood cells. When the nanorobots are tasked with making a plug, when their task is finished, they die.

What can be very dangerous are dormant diseases.

It has been written about, but there is no evidence yet.

You can wrap a disease in a nano-lock, which only opens at 18GHz pulse 3 times in a row. This means that 'vaccinated' and probably also 'vaccinated' can get a disease that may be incurable. How much signal is needed I do not know, but the thought is scary.
