# Censorship of the Internet – A very inhuman law/dictate

From Wikipedia

Faster than normally is to around DNS and go directly to the website.

Slower than normally is to use VPN and go indirectly over VPN and DNS to the website.

Directly to the without DNS, you will: "dig example.com" and look for "example.com. …
96.7.128.198". Add a line in /etc/hosts (windows \etc\hosts):
96.7.128.198   example.com

VPN can be much slower than normal, but also gives a fair security unless you choose a VPN that is dishonest.

It is clear we are going socialism or dictatorship in Europe and most of the world. Internet is one of the powers the Mafia (government, military, law, police) try to take more and more control over. The Mafia and the Bilderberg above them are focused on saving as much money as possible and having the common people be as profitable as possible. It will not work if Internet is free, it must be controlled by the Mafia.

We will see much more control of the Internet in the future. One of the steps they could take, is to people being forced to login before the can access the Internet You have probable tried the same thing on a hotel years ago. Before you could go to the Internet, you would need to login. That means the one who pays the invoice to the ISP (internet service provider) is responsible and can be put in jail for saying something that does not agree with the Mafia.
