It is not hot in the street, the dog is “microwaved” in a few seconds in Maui

I will avoid looking at the people died by “microwaving” in seconds, it may be a little too much. The dog contains blood. Blood leads “microwaves” in seconds to to an air form.

Dry plastic and dry wood cannot lead the “microwaves” and is therefore untouched, except if they are very near the succeeding flames.

Even though car glass is not conductive towards electricity, it is still heated up to more than 2500°C by the “microwave” in seconds,.

All metals are heated, some greater than other. Aluminum is heated above 660.3°C in seconds. You can sometime see the aluminum from cars running down the street from the brakes.

Even though trees are dry on the outside, they can contain water at the inside. If the “microwave” hits the tree, the water will be heated and move into air form in seconds. Therefore trees that are hit by the “microwave” are burning inside the trunk without you see it. The trees will normally only last 1 to 2 years.

If “microwave” hitting dirt will on average go 1 meter down and cause death to all animals, even down to insects. You cannot grow anything because the upper layer of earth is with no life. They say that life first come back by the surrounding non “microwaved” orbits in about 10 years time.

Blue, $6.66 \cdot 10^{14}$ Hz, is a special color to the “microwave”. I was first discovered some years back. Blue paint or blue plastic seems to protect every thing under it. The color seems to be marine blue. You can buy protection against “microwave” in some countries. They have millimeter thick plastic to cover the roof. It is not unusual to see blue roofs in some countries. It looks hysteric but, saving lives and villa.

Extend 1 – Behind the enslavement

We the elite will live in harmony and the people serve them. We do not like to be involved too much with the people. There are much too many people, the best thing you can do is to lock them down in SMART cities. Every one over 40 can be discontinued and made into liquid.

How can we make Lahaina a SMART city? We close the school so most of the people will stay at home. We inform the rest of the elite to leave Maui. We involve a police outside the Hawaii to “regulate” traffic to and from the Lahaina. We confer with the military to “microwave” Lahaina and be careful not to “microwave” our villas and factories.

People jumped in the ocean but, many did not survive. Some boats were on fire because of heating metals by “microwaves”.

People hit by “microwaves” are dead within seconds, so right after the “microwaves” put the people in body bags and bring them on trucks out of the Lahaina. The plastic that are not burned by the flames, transport them out by trucks.

The foreign police shall tell the traffic to go back to where they came from, except “official” traffic. The police needs to shoot if people do not comply.

Lahaina was now surrounded by black plastic 2 meter high.

Some people asked for the 2000 kids but, most of them was moved by trucks in body bags. People asked for food but, the food was not cooked in an “ordinary” kitchen. Later people asked their insurance company to have money for their destroyed homes but, the insurance was canceled a month before.

After a few years we have bought the Lahaina as people gave in. They could see that they needed some money to live on.

It is simple to destroy a town and build a SMART city with much fewer people. We can tolerate people if they are living in SMART cities. We can control them, moderate them and renting everything is sufficient for them.

It hides the secret when it is night time

Expand 3 – How many “microwaves” attacks are there the world over

Alone in USA there are more than 30 sites and towns. In Canada there are 2 cities. In England there is one city. And in China I saw one enormous city but, there must be more. Brazilian has many small and large cities.

Remember 9/11-2001? The towers were with dynamite or similar so we could see “the airplanes be parked inside.” Some time after the “microwave” were engaged. You can see the vehicles parked at the foot of the towers have melted 2500°C glass.

I am living in Scandinavia. A little jump and then I am in England. What will and can we do if presented with military “microwave”?
