

Hyper Data Centers

Water

Hyper Data Centers are using an average of 10,000,000 liter per day.

Nobody knows what they use the water for.

Electricity

On an average the Hyper Data Centers are using 500,000,000 watt per second.

Nobody knows what they use the electricity for.

Diesel generators

Big diesel generators 50,000,000 watt for each generator.

Nobody knows what they are there for, except that they could backup power if there is too little from the grid.

Land area

Hyper Data Centers are using more areas than a large town.

Nobody knows what they are using all that land for, except that the buildings are enormous.

Noise

Hyper Data Centers make ELF, Extremely Low Frequency, noise at a huge distance.

Nobody knows exactly where it comes from.

100's of Hyper Data Centers in America

The huge amount of water makes no real sense. They could have cooling towers and only needed water one time. They could have blown hot air out to the birds through a heat exchanger and only needed water one time. They could have placed the Hyper Data Centers near the ocean and used heat exchangers to separate the salty water for the clean and fresh water.

The very large scale of water the Hyper Data Centers are using can only be used to force people into the **15 minutes jail cities**.

Pumping water needs electromotors or diesel motors. By saving on diesel they use the electricity from the grid.

The Hyper Data Centers are also forcefully gaining people into the **15 minutes jail cities by breaking the electricity**.

The ELF noise from the Hyper Data Centers is a third way of gaining people in the **15 minutes jail cities**. Without grid electricity you can produce your own electricity. Without pipes of water you can collect water form rain. But with the ELF noise you need to move to the **15 minutes jail city**.

The Hyper Data Center takes up a lot of space, both in buildings and surrounding areas. There is no way that the Mafia (government, military, law, police) would have money, infrastructure and components for this amount of computers, **no way**.

I can only guess. Maybe the whole purpose is to get people in to the **15 minutes jail cities** like in China. Maybe the water is pumped in the buildings, at least some of the buildings and few other buildings are showing computer racks to demonstrate for the costumers.

Does anybody knows if other countries, apart from China and America, are building Hyper Data Centers?

Yours sincerely
Carl Johan Friis-Hansen
